PATENT Express Mail Label ER 739370862 US Attorney Docket No. N1280-00220(TSMC2003-1245)

## WHAT IS CLAIMED IS:

1. A method for refreshing a memory system having a predetermined number of memory blocks, the comprising:

providing a system refresh signal for refreshing the memory system, the system refresh signal being used as a first refresh request signal for refreshing a first memory block;

sequentially refreshing one or more subsequent memory blocks of the memory system,

wherein all the memory blocks are refreshed within a retention cycle of the memory system.

- 2. The method of claim 1 wherein the providing further includes generating the system refresh signal by a refresh timer coupled to the first memory block.
- 3. The method of claim 1 wherein the sequentially refreshing further includes sequentially generating one or more refresh request signals for the subsequent memory blocks.
- 4. The method of claim 3 wherein the sequentially refreshing further includes providing a refresh request signal by a refresh control circuit in each subsequent memory block to its immediately subsequent memory block while it is undergoing a refresh operation.
- 5. The method of claim 4 wherein the sequentially refreshing further includes generating a refresh command based on the refresh request signal for refreshing each memory block.

- 6. The method of claim 4 wherein the refresh commands for the memory blocks do not overlap in timing.
- 7. The method of claim 3 wherein the refresh requests do not overlap in timing.
- A memory system comprising:

   a first memory block coupled to a refresh timer; and
   one or more subsequent memory blocks without refresh timers contained

wherein the refresh timer generates a system refresh signal for refreshing the memory system, and

wherein all memory blocks have a refresh controller contained therein which enable sequential refresh of the subsequent memory blocks.

- 9. The memory system of claim 8 wherein the refresh controller of the first memory block receives the system refresh request generated by the refresh timer.
- 10. The memory system of claim 8 wherein the refresh controller of each memory block generates a refresh request for an immediately subsequent memory block.
- 11. The memory system of claim 10 wherein the refresh controller of each memory block generates a refresh request for an immediately subsequent memory block when the memory block it belongs to is being refreshed.
- The memory system of claim 10 wherein the refresh requests generated do not overlap in timing.

- The memory system of claim 10 wherein the refresh controller of each memory block generates a refresh command for refreshing the memory block it belongs to.
- The memory system of claim 14 wherein the refresh commands generated do not overlap in timing.
- 16. The memory system of claim 8 wherein the refresh controller provides a refresh address.
- A dynamic random access memory system comprising:

  a first memory block coupled to a refresh timer; and

  one or more subsequent memory blocks without refresh timers contained therein,

wherein the refresh timer generates a system refresh signal for refreshing the memory system, and

wherein all memory blocks have a refresh controller contained therein which enable sequential refresh of the subsequent memory blocks.

- 18. The memory system of claim 17 wherein the refresh controller of the first memory block receives the system refresh request generated by the refresh timer.
- The memory system of claim 17 wherein the refresh controller of each memory block generates a refresh command for refreshing the memory block it belongs to and a refresh request for an immediately subsequent memory block when the memory block it belongs to is being refreshed.

Express Mail Label ER 739370862 US

- The memory system of claim 19 wherein the refresh requests generated do not overlap in timing.
- The memory system of claim 19 wherein the refresh commands generated do not overlap in timing.
- The memory system of claim 17 wherein the refresh controller provides a refresh address.
